# Modernizing UX: InfoPath to Power Apps

**On-Prem to SPO**

Files stay synced, allows for live collaboration, and sharing in a containerized way to ensure content is secure.

**Security on-prem to GCC High**

Security stays inside the file, making it safe to collaborate real-time.

**OOTB Approvals to Status Linked Logic**

Instant notifications and real-time tracking exactly who the tasks are with and with the ability ping the correct teams instantly.

**InfoPath forms to Power Apps**

Mobile-friendly applications that allows for logic to improve user experience.

**Manual data clean up to Automation and JSON**

Seamless automation and status updates. Color-coded views with no more manual tracking.

**Broad Permissions to List Driven Security**

Users only see what they need based on status and access groups generated by sublists.
